If a wind had been blowing in the direction of the tannery last Sunday morning while the mill was burning, the tannery might have been saved, provided this place had a good system of water works. We don't know of any other human agency that could have saved it, under those circumstances. The absence of wind was a stance. The like of which wouldn't occur once in a hundred times. Moral —give us water works.

Last Sunday morning's fire was only a forerunner of what will come to Andover as sure as fate, namely, a conflagration that will wipe out a large share of her business, unless some effective measures are taken to prevent it. Some day the flames will embrace each other over the accumulated wealth of years, and their hissing, poisoned tongues will mock the cry that will go up for help, when no help is near. And up yonder on the hillside will be a stream of crystal pure water, bubbling up from the fountains of the earth, rushing down the declivity only to be lost in the streams and creeks, and pass on, out of sight forever. And the gurgling water will echo the mockery of the flames, as it passes by, powerless to give the aid that nature designed it to give. What are you going to do about it?
