an elaborate investigation, for the purpose of determining the annual con-sumption of flour by the people, has developed results which "gradstreet's" has pripted with much folioss of de-tail. They purport to show that the tail. They purport to show that the consumption is about 5.387 bushels for each inhabitant, instead of about 42-3 busiels, as the Agricultural Depart ment has for many years reckoned.

The American Club, of Stuttgart Germany, will celebrate again this year the anniversary of the Declaration of Independence by a banquet ball, etc. For the first time the club will publish a "festzeitung" in two editions, the first containing the festival programme, the Declaration of Inde-pendence in English and German, etc.; the second on the evening of the Fourth, containing the names of all the participants and a report of the exer-

Aluminium as a useful metal has aken a remarkable hold of the world in the last ten years. The price has just touched 48 cents a pound, whereas in 1884 it was \$9. In 1894 over 700,000 pounds was consumed in this country, and this year the output will be over 2,000,000 pounds, while in 1884 the amount was but 150 pounds. The electrical method of extracting aluminium from clay has greatly the result. from clay has greatly cheapened the metal, and brought it into extended use, especially for making kitchen utensils,

The well-known astronomers, Percival Lowell of Boston and T. J. Lee of the University of Chicago, are to begin a series of astronomical observations in July in Mexico. The observations will continue for three years. Mr. Lowell will study the planet Mars systematically, while Dr. Lee will search the Southern heavens for double stars. Their movable observatory will have one of the best telescopes in the world. Its 24-inch lens has been shown by fests to be superior to the 26-inch glass at the Naval Observatory in Washington.

A report recently published gives a idea of the amount and value of the labor produced in English prisons. At Wandsworth 1000 prisoners produce oods of the value of \$60,000 per annum. The labor of the 1000 prisoners at Pentonville only yields \$32,500 per annum, but at Wormwood Scrubbs the same number are worth \$100,000 every year. The various objects manufact-ured from raw material are brushes, bags, mattresses, clothing, leggins and shoes, besides a large number of arti-cles made by carpenters, blacksmiths, tinsmiths and bricklayers. All the bags and boxes used in the general postoffice are made in British prisons.

San Francisco has had the novelty of a strike by Chinese laborers for higher wages, and the even greater novelty of the ephacing of the Chinese strikers by white girls, who are working for the wages that the coolies refused to accept. The trouble occurred in a factory owned by a Chinese first in a factory owned by a Chinese firm which is manufacturing blouse waists. The girls are doing better work than the Chinese did. By working hard for cleven hours a day they can make from 50 to 55 cents, and some of them have been known to make \$1 for three consecutive days, but the next day they had to lay off and rest. The strikers, like the white unionists whom they imitate, gather at the factory at the closing hour to hoot and "make faces"

Some years ago the sect of Abstain meat and regard the killing of animals as sinful, built a church in Third street Philadelphia. The building is now oc-cupied by a firm of pork packers and sausage makers.

In an article in The Yale Medical Journal, Dr. Edwin A. Down combats the popular impression that insanity is increasing. He says that the increase for the last twenty years, shown by the official records, is comparatively trifling, and is more than accounted for by the change in conditions which has resulted in sending to insane asytums many persons who were previous ly kept in almshouses or in families, and not reckoned in making up the record of the insane.

The point has been brought out by a orrespondent of a marine paper that it is no wonder the Spaniards willing to assault and insult the United Consul at the time of the adoption of Cuban resolutions by the House . In Barcelona only two Amer-ican sailing yessels were seen last year, and it is asked: "What reason had they for believing that we had a flag or a people capable of defending it?" In connection with this, it may be stated that only two American salling voscols visited Liverpool in 1895 and during the same year not an American merchantman touched at the cities of Hull. Co diff, Glasgow, Belfast, Dublia, Ports-mouth, Rotterdam, Genoa or Naples. The other side of this picture was shown in 1801, when the merchant feet of the United States aggregated 5,539,813 tons, and the flag was geen in every port in the world where ships

his headquarters flag. Should he flag up in a half ters would be up in the air. He seldom takes his flag with him when he leave the city, but should he do so head-quarters would be exactly where the flag is, whether he was in the cars or flag is, whether he was in the call at a hotel. The law has never designated an official headquarters. When General Sherman moved his residence General snerman moved his residence from this city some years ago to St. Louis the headquarters flag went with him, and the War Department found it was no longer headquarters. Neither was there any way by which the de-partment could find where headquar-ters were except by telegraphing for the whereabouts of General Shervan and his flag."

According to Harper's Weekly, more than ten thousand people were mur-dered in the United States last year. In the year 1888 less than four thousand were murdered. The increase of population in seven years has been considerable. Last year business was bad, and people were cross, and more nurderously inclined, no doubt, than common. Still, taking everything into consideration, the increase of murders was astounding. It ought to be checked, and the only practicable way to check it is to have murdereres suffer the legal penalty of their crime. It is shocking to kill anyone, but if one must choose between killing the guilty after conviction and having the inno cent killed offhand, there cannot be cent killed offhand, there cannot be any hesitation about what duty and common sense demand. Murder must be made more unpopular in the United States.

If Dr. Nansen has really discovered the North Pole, how is he going to prove it. This question has been asked repeatedly of late, and scientists have been unable to give a satisfactory anwer to the problem. Prof. Dysche, of Kausas, who is now organizing a polar expedition, explains how absolute proof of the success of his venture may the North Pole. "I will take a bullet," says Prof. Dysche. "This bullet will cast a shadow. In our latitude that bullet would in a day's time describe an eclipse. At the North Pole the shad-ow would make a perfect circle. I will photograph the shadow throughout the day. Of course, it will be necessary to bring back only an arc or part of a As a day at the pole is six months long, it would be practically impossible to get a picture of the perfect circle. Any part of it, however, would be enough to convince a scient ist that I had reached the North Pole."

Citizens whose anxiety to learn the result of an election cannot await the appearance of the next day's news-paper will be interested to know how he vote is expeditiously counted in St. Louis. In that city there are two sets of judges and clerks at each polling place. The voting is done on the Aus-tralian system. Under the law, one set of judges and clerks, comprising a Republican and a Democrat, have charge of the voting for an hour. At the close of the hour they take the ballot box and begin to count the ballots that have been cast. In the meanwhile another ballot box is substituted and the other set of judges and clerks take charge of the voting. At the end of charge of the voting. At the end of their hour they, in their turn, begin to count the votes. By this system of al-ternating the judges the vote is kept counted as it is cast, and the complete result is attainable within an hour afthere the polls close. A heavy penalty hangs over any one who announces how the vote stands at any polling place until after the polls are closed and the final results are reached.

What is described as the finest church organ in this country is an instrument just placed in the South Congregational Church in New Britain, Conn. It is the gift of a wealthy member of the church, who offered carte blanché in the matter of expense. R. P. Paine, the organist of the church, who is also well known as a conductor consulted with expert organists every-where, and planned the specifications of an instrument which should include every possible modern improvement on a scale never before realized in this country. George S. Hutchings, the well-known build er of Boston, built it at an estimated cost of over \$20,000. Its resources are wonderful—nothing is impossible on it: The wealth of combinations is amazing: there are innumerable things that can be done almost with a touch. The builders have exhausted all the resources of modern mechanical ingenuity to make it as responsive and effective as possible. The organ is fitted with the most perfect culiar advantage of this system is that the console is movable, so that the or gan dan be played from any part of the

Colors of German Cars. On the State railways in Germany the carriages are painted according to the colors of the tickets of their respective classes. First-class carriages are painted yellow, second-class green and third-class white.

Stray Dogs in London

tending to the present date, 10,623 dogs cted by the police in the London streets, and conveyed to the home at Battersea, since the muzzling order came into force. Of this number 8.902 have been painlessly dispatched. When it is considered that only 600 of the captured animals were claimed by their owners, we are face to face with the astonishing fact that 10,000 waifs and strays must have been picking up a living somehow in our midst, the popularity of our canine com-panions forbidding the idea that more than a very small percentage of own-ers would be too callous or careless to endeavor to recover their pets. Only one case of rabies would appear to have en detected in this canine multitude (which developed after the animal had been in the institution some little time); out, nevertheless, it was certainly tim that steps were taken to diminish this constantly increasing number of owner-

Take Care of Your Watch.

The mechanism of the human body re-The mechanism of the human body reminds one very much of the mechanical construction of a fine watch, the wheels, oggs and screws answering to the muscles, and the delicate springs are what may be likened to the nerves. One cannot move without the other, and yet the action of each is separate and distinct. So it is with the nerves and nuscles of the human body. The ailments of the muscles are distinct from the ailments of the nerves, and, like the mechanism of a watch, if exposed to sudden change of heat and cold, they get out of order and for the time are useless. Especially is this so at this season of the year, when from exposure, negligence or wann of care, the nerves are attacked and neurally a in its worst form sets in. But the oil to the works of a watch so is St. Jacobs Oil to the nerves thus deranged. It is acknowledged by thousands to be the best and most permanent cure for this most freaded disease, hence it is well to look after the human warch as well as the one in the pocket. e very much of the mechanical con
