Relieved in 20 Minutes.
Cure for the Heart gives perfect relief in 20 minutes, and speedily restores to a peerless remedy for Falterings of Breath, Smothering of the Left Side and all symptoms of Blood Poisoning.

It will save your life.

A New Kentucky Cave.
Citizens of Glasgow, Ky., have discovered a large cave near Chambers. The "find" is described as follows: "The cave is small at the entrance, and they were compelled to crawl for a distance of several hundred feet to reach a larger opening. Then the passage became larger, and for a quarter of a mile they could walk upright. They came to what was evidently a cavern, and could proceed no farther. The explorers, however, dripping with water, which was dripping from the walls of the cave, were flowing. They followed the stream, and finally got back to the main entrance. A little farther on they found a large chamber, and they had yet found. This was the extent of their explorations, as they returned to the mouth, after a distance of more than a mile. They found along the cavernous small caverns leading to the main entrance. About a mile from the entrance was a sort of eastern tenement, and twenty feet from the cavern. Other things of interest found in the cave were different species of insect and reptile life, and numerous white bones and many-colored insects. Chicken bones and other things a long distance from the cave are supposed to be carried there by foxes and other animals. The cave will be explored at an early date."—*Chicago Journal.*

Best Mounted Game Head.
The head of the musk ox is the most mounted game heads and next to that of the bison, or buffalo. The heads, well mounted, sell for \$125 to \$200. A head at present would be one exception and a fine one sold for \$250. Fifteen well-mounted buffalo heads brought for from \$50 to \$100. A price is accounted for because the scarcity of the buffalo, which practically disappeared from the United States. The wood of the Great Slave Lake region of North America, which is abundant, or mountain districts, are more numerous than the buffaloes of this country, but the bison is not so large as the buffalo, and its hair is very black. Musk ox heads sold at \$200 and upward. A head owned by a taxidermist is valued at \$750.

HELP TELLING.

So small, so large, from the Atlantic to the Pacific, reliable, are attached to the health letters.
Write to Lydia E. Pinkham, and receive so many people who have not been deprived of their hands have learned to put their feet to uses not dreamed of among us. In the native quarters of many of the towns a butcher may be seen seizing a piece of meat in his hands and cutting it in two with a stroke of his knife held between his first and second toes. Similarly, the shoemaker uses no last, but turns the unfinished shoe with his feet while his hands are busy in shaping it. So again the carpenter holds with his great toe the board he is cutting, and the wood-turner handles his tools as well with his toes as with his fingers.
The use of the feet to assist the hands in their labor is not, however, the mere result of practice, but is due to the fact that the Hindu foot is different from ours in its anatomical conformation. The ankle of the Hindu and the articulation of the back of the foot permit considerable lateral motion.
Then the toes possess a surprising mobility. The great toe can be moved freely in all directions, and the first and second toes are separated by a wide space, sometimes as much as five-eighths of an inch across at the base

CURE FOR ALL THE PAINS.
Use the Good.

THEY WORK WITHOUT ARMS.

WOMEN WHO WIN LIVELIHOODS WITH THEIR FEET.
A Lady Artist Who Paints With Her Pedal Extremities—A Remarkable Member of the British Parliament—Armless Wonders of India.
One of the leading Belgian artists of the present day is a gentleman who, in default of arms, paints with his foot. His name is Fehn; he lives at Antwerp, where he has a spacious atelier in the market place.
He uses his supple feet, without any apparent effort, to open his color box, clear his brushes, set his palette, and arrange his writing materials. He paints with surprising swiftness and delicacy of touch. It may be said of

him, too, that he writes an excellent foot. One of his friends says his writing is as bold, free and flowing as any handwriting with which he is acquainted. He is, moreover, a man of gentle nature, courtly in manner, of highly cultivated intelligence, and no less engaging in speech than in appearance.

Earlier in the present century there flourished an armless artist, a lady named Hawlin, who, besides painting very tolerable pictures, learned to do with her toes a variety of interesting and ingenious things—cut out watch papers and the like. She grasped and worked her scissors in some way that has never been explained.

Miss Biffin was only a trifle less unfortunate. She was born without toes or hands, and without any more arm than was represented by a stump cut short above the elbow. Yet she managed to make for herself a comfortable living in the artistic way.
She painted miniatures with exquisite neatness and accuracy, and added to this by cutting out paper profiles with the aid of her mouth, a pair of scissors, and her two little stumps. The Earl of Morton employed her to paint some portraits for him, and introduced her to the notice of royalty, who also patronized her, and put her in the way of obtaining advanced lessons in painting from one of the foremost men of the day. He also gave her a small pension, with the aid of which she set up as a regular professional. She fell in love and married, but carried on her work, and was always known under her maiden name. She died not many years ago.

There died recently an ex-member of Parliament who was in many respects one of the most remarkable men this century has seen. His name was Arthur McMurrough Kavanagh, and although he had neither arms nor legs he was able to carry on most of the ordinary affairs of life quite as well as the majority of those who are provided by a gracious Providence with both these limbs. Moreover, he could ride to hounds, pursue and kill game, and land a thirty-pound salmon as well as the most expert sportsmen.
How did he contrive to do all this? Though the apology for arms extended only a few inches from the shoulders, he was able by constant practice from childhood to turn the stumps to practically any use. He used no hooks. In shooting he carried a gun without a trigger guard, and when he wanted to fire he threw the weapon across his left stump, supported the stock, and touched the trigger with his right.
In hunting and riding his saddle was a kind of basket, in which he was properly fastened, the bridle reins being lashed around what it is convenient to call his arms, and his hunting whip thrust under the straps close to his side, and such was the suppleness and strength of the limb at this point that by an energetic side movement he could punish a horse as heavily as any ordinary rider. That he did not neglect the more sober accomplishments of life is clear; for he wrote a capital hand and was an excellent amateur artist.

In India many people who have not been deprived of their hands have learned to put their feet to uses not dreamed of among us. In the native quarters of many of the towns a butcher may be seen seizing a piece of meat in his hands and cutting it in two with a stroke of his knife held between his first and second toes. Similarly, the shoemaker uses no last, but turns the unfinished shoe with his feet while his hands are busy in shaping it. So again the carpenter holds with his great toe the board he is cutting, and the wood-turner handles his tools as well with his toes as with his fingers.
The use of the feet to assist the hands in their labor is not, however, the mere result of practice, but is due to the fact that the Hindu foot is different from ours in its anatomical conformation. The ankle of the Hindu and the articulation of the back of the foot permit considerable lateral motion.
Then the toes possess a surprising mobility. The great toe can be moved freely in all directions, and the first and second toes are separated by a wide space, sometimes as much as five-eighths of an inch across at the base

of the toes and two inches at their extremity. The articulation of the hip is also peculiar, and this renders it easier to use the toes in handling the objects, by enabling the Hindu to sit in a squatting posture much more comfortably than we can do.
A similar formation of the feet and toes is found among the Annamese, but it is not, as might be supposed, a common thing among barbarous and savage tribes. One naturally thinks of the resemblance to a monkey which a human being using both feet and hands must present, and yet the Hindu's foot is not at all like the foot of an ape or monkey. The great toe is not opposed to the other toes like a thumb as occurs with the monkey, and accordingly the pedal dexterity of the Hindu is not to be taken as an indication of similar descent.—*Tit Bits.*

MORE INVENTIONS NEEDED.
The Possibilities of the Brain are Richer Than a Gold Mine.
If one should learn the location of a hidden treasure he would steal out at midnight, working hard and fast to secure it before his whereabouts became known to another, says an exchange. But one is absolutely indifferent to the great wealth that lies beneath one's very nose, as it were, in the need of inventions.
This is not only a progressive age, but it is an age that likes to be amused, if the amusement is tinged with a modicum of appeal to what we call our astuteness. When the inventor of "Pigs in Clover" patented his clever little scheme of inducing the wisecracks as well as the foolish to a trial of nerve, he had no idea that his happy thought would net \$100,000. Yet such is the fact. The wooden return-ball that has delighted every child earned \$50,000 for the inventor in one year. The little tube inserted in rubber toys which, when pressed, gives forth a sound supposed to represent the cry of an animal in whose body it is lodged yields thousands of dollars yearly.
There isn't a man who sees one of these simple inventions who doesn't feel an inner consciousness that he could have done the thing himself and he scolds himself mentally because he was not the first one to think the happy thought.
By no means has everything been invented. The need of "happy thoughts" increases as the world advances. Thousands of dollars lie in wait for the man who will invent any improvement on the bicycle. Each manufacturer of the silent steel stands with open purse to welcome the inventor of the least betterment that he may outrank his rivals. An invention that will deaden the noise of the typewriter will bring with it a large fortune. If any man can conceive a method of making a bottle which cannot be refilled when emptied, he can soon rank with the millionaires. The largest paper house in the world is begging for a machine to place mourning border on stationery. Every woman in the land is crying out for a cheap, handy scissor sharpener and a cheap device to help teach young children to walk would be hailed with delight by thousands of tired mothers. A self-locking bat pia and a good folding baby carriages are other inventions sure to find ready purchasers among women. These are simple things, but it is really the simple things that yield the large incomes.
A woman was dressing in a hurry for the theatre. As fast as she hooked one part of her waist the other part unhooked. The words with which she gave vent to her annoyance were of the class that appeal rather to the ear than to the eye. Her husband looked up in surprise. "Humph!" he mildly ejaculated. "You would do better to hump these hooks," exclaimed the exasperated woman. The hump was put on the hook and the simple invention not only netted an immense revenue, but has proved a blessing in the home.
The bent wire by which the cork is held in place in the soda water bottle is a most simple invention, but it was a lucky man who thought of it and patented it and thereby received a princely income.
There are other needed inventions that would require something more than merely inventive genius. For example, a bicycle that will turn round in about its own length; an attachment for embroidering machines, permitting the needle to take the thread directly from the spool—one of the largest lace manufacturing houses is asking for this; an apparatus for utilizing wave power; a cheap guard attachable to and detachable from freight cars to keep brakemen from falling off the roof—as there are thousands of accidents yearly from this cause the inventor would not only make his fortune, but would be instrumental in saving life and limb of his fellow man. A means to make kerosene odorless would be of practical use and would appeal at once to manufacturer and buyer. The list might be extended indefinitely, but if some one will invent a collar button, or any means to fasten a collar that will dispense with the sad loss of patience of the average man straggling with freshly laundered linen and a refractory button, or if he will invent a toothbrush the bristles of which will not come out, or a shoe lace fastener he will erect for himself, like the poet of old, a monument more lasting than brass.—*Chicago Record.*

"Uncle Billy" Hubbell of Bath, N. Y.

From the Advocate, Bath, N. Y.
Residents of Bath, N. Y., have taken a great fancy of late to Lake Sababria, which lies just outside the village, and during the past two years a score of new cottages have sprung up on its shores. Choice locations are becoming scarce and the early settlers are careful now to keep what dooryard they have left. Your correspondent visited the Lake recently and dropped in to see "Uncle Billy" Hubbell in his comfortable cottage under the pines. Mr. Hubbell established himself at the Lake before the boom commenced, and has one of the prettiest locations there.
Mr. Hubbell said that this was the first spring in twenty years in which he had been free from his old enemy, sciatic rheumatism. He thought he had contracted this disease while running an express messenger on the Erie and other railroads between 1849 and 1869, although he did not feel its acute symptoms until some fifteen years later. Mr. Hubbell is now the second oldest expressman in the United States and recalls many interesting reminiscences of these early days. In

has suffered from sciatic rheumatism ever since. Speaking of the many efforts he had made to get relief from this painful ailment, he said that while in New Mexico he visited the Las Vegas and Elmore springs, and later he tried those at Manitou, Col., and Little Rock, Ark. Coming east he tried the White Sulphur Spring, Ohio, St. Catherine, Can., and Clifton and Avon, in New York, but without being able to get the slightest relief. As he advanced in age, his trouble became more painful. "Why," he exclaimed, pointing to the farm-house of William Burleson, about six hundred feet distant, "I would yell so when those twines caught me that they could hear me down there."
William H. Hallock, owner of Hallock's bank, in Bath, is a nephew of Mr. Hubbell, and last winter he insisted that "Uncle Billy" should try Pink Pills for Pale People for his rheumatism. Mr. Hubbell, free to say that he had no faith in the pills whatever, and only tried them because of the insistence of Mr. Hallock. He had already tried "more than a million remedies" before he came to Pink Pills and as none had rendered him the slightest benefit, he was pretty well discouraged. However, to please Mr. Hallock, he got a box of Pink Pills. Since then (some three or four months), Mr. Hubbell has not felt a single trace of rheumatism, and is now on his fourth box of the pills. He cannot explain how this marvelous relief was effected, but feels sure it was the pills which did it, and is now as enthusiastic in their endorsement as was his nephew, Mr. Hallock. Mr. Hubbell now comes to Bath almost every day, and says he could ride a bicycle if he only had some one to help him on and off.
Subscribed and sworn to before me this 22d day of May, 1896.
W. P. Fish, Notary Public.

Dr. Williams' Pink Pills for Pale People are now given to the public as an "unfailing blood builder and nerve restorer, curing all forms of weakness arising from a watery condition of the blood or shattered nerves. The pills are sold by all dealers, or will be sent post paid on receipt of price, 50 cents a box or six boxes for \$2.50, by addressing Dr. Williams' Medicine Company, Schenectady, N. Y.

Color in Uniforms.
An experiment was recently made in Europe to determine what color in a soldier's uniform is the least conspicuous to an enemy. Of ten men, two were dressed in light gray uniform, two in dark gray, two in green, two in dark blue and two in scarlet. All were then ordered to march off, while a group of officers remained watching them. The first to disappear in the landscape was the light gray, and next, surprising as it may seem, the scarlet. Then followed the dark gray, while the dark blue and the green remained visible long after all the others had disappeared. Experiments in firing at blue and red targets, according to the same authority, proved that blue could be more easily seen at a distance than red.—*Boston Budget.*

Too Warm for Thermometers.
At Fort Mohave, north of Needles, the government thermometer burst with extreme heat a short time ago. It only registered 123 degrees, and when the heat tried to turn the mercury up to 130 "she went bust." The same thing happened at Parker, Arizona Territory. The government ought to see to it that these points of extreme heat are supplied with instruments that will register about 140, as a reading of 130 is frequently to be had.—*Redlands (Arizona) Citigraph.*

Gladness Comes

With a better understanding of the transient nature of the many physical ills which vanish before proper efforts—gentle efforts—pleasant efforts—the knowledge that so many forms of sickness are not due to any actual disease, but simply to a constipated condition of the system, which the pleasant family laxative, Syrup of Figs, promptly removes. That is why it is the only remedy with millions of families, and is everywhere esteemed so highly by all who value good health. Its beneficial effects are due to the fact, that it is the one remedy which promotes internal cleanliness, without debilitating the organs on which it acts. It is therefore all important, in order to get its beneficial effects, to note when you purchase, that you have the genuine article, which is manufactured by the California Fig Syrup Co. only, and sold by all reputable druggists.
If in the enjoyment of good health, and the system is regular, then laxatives or other remedies are not needed. If afflicted with any actual disease, one may be commended to the most skillful physicians, but if in need of a laxative, then one should have the best, and with the well-informed everywhere, Syrup of Figs stands highest and is most largely used and gives most general satisfaction.

It is against the religion of Mohammedans to receive interest on money. Those of them in England, who have deposits in the post-office savings banks, therefore refuse to draw more money than they have deposited.
All who use Dobbins' Electric Soap, praise it as the best, cheapest and most economical family soap made; but if you will try it, once it will tell a still stronger tale of its merits itself. Please try it. Your grocer will supply you.
Medicated honey is the latest novelty. A French scientist causes it to be produced by keeping bees under glass, so that they can only sip the sweets of flowers which possess medicinal properties.
How's This?
We offer One Hundred Dollars Reward for any case of Catarrh that cannot be cured by Hall's Catarrh Cure.
F. J. CHENEY & Co., Prop., Toledo, O.
We have underigned, have known F. J. Cheney for the last 15 years, and believe him perfectly honorable in all business transactions and financially able to carry out any obligation made by their firm.
WEST & TRUAX, Wholesale Druggists, Toledo, Ohio.
WALDRING, KINMAN & MARVIN, Wholesale Druggists, Toledo, Ohio.
