**BLANCHE SWEET**

In a Picturization of Henry Seton Merriman's Novel "The Sowers," Auditorium, Saturday Evening.

There is a timeliness in the presentation on the screen of a story like "The Sowers." It is a filmed version of Henry Seton Merriman's widely read novel and the story tells of movements in Russia to free the serfs from political and industrial oppression.

Blanche Sweet, one of the most noted stars of the screen, appears in the leading role of "The Sowers" and will be seen in a part teeming with human sympathy. The supporting company is brilliant in person. It includes Thomas Meighan, the young leading actor who recently made such a success in "The Trail of the Lonesome Pine," Theodore Roberts, Mabel VanBuren, Camille Astor, Horace B. Carpenter, Ernest Joy and other members of the lasky all star company.

In "The Sowers," Blanche Sweet will take the role of the daughter of a royal Russian household and she will have an opportunity to display many beautiful costumes.

The photoplay was produced under the direction of William C. DeMille who has been so successful in the direction of Miss Sweet's recent production, "The Ragmuffin," and the sensational "Black-List."—Advertisement.

**CONCERNING SUFFRAGE**

The vote for president in Montana showed an increase of 221 per cent. over that of 1912; in Kansas an increase of 112 per cent. In both these states, women cast their first presidential votes. Even so do official election returns answer the query: Would women use the vote if they had it?

"It used to be like a day in hell when we had an election," said Sergeant Farrell, a veteran police officer in Chicago to a reporter of a suburban paper who wanted to know about the disturbances on election day, "but now it is all changed. It is the women."

"The most peaceful day in Chicago's history," answered Lieutenant Elliot, "when the women go to the polls drunkenness, quarreling and fighting ends. That's our experience."

For every five men in Chicago who voted the Socialist ticket there were but two women, while for every four women who voted the Prohibition ticket there were but three men. Showing again that women as a class are more conservative than men on the question of Socialism and rather more radical on the question of Prohibition.

**NEW PLAN TO FIGHT CATTARAUGUS**

hundreds of Millions Worth of Gold Now in Indian Territory may be Liberated by New Method of Mining.

A new application of principle may be the key to unlock a vast store of gold in Western New York. The principle is that of oil field mining.

For several years it has been known that there is gold in the Cattauga Indian reservation. In 1880, 1888, 1898 and 1909, mining operations were conducted and assays made. The tests and found that there was a large amount of gold in the territory. A mile along the creek, beginning at the mouth of the river and extending southwest for miles, was rich in gold deposits. An average of 62 1/2 cents of gold to the ton of soil. This figure was based on the values in most California gold fields. The gold in the famous Oroville district is about 30 cents a ton.

The gold in the Cattauga district, however, was very fine and most a powder. It was so large a proportion of the gold would be washed out in the dredging processes. The gold could not be operated. So plans for the Cattauga gold fields were abandoned.

Within the last few years the perfection of the process of flotation has revolutionized the old-mining industry. The process is based on the principle of the fact that the gold is coated with oil. This was known to the Greeks. Historians tell us that the Greeks used feathers with pitch in recovering gold. In 1880, Carrie J. Everado school teacher, ever since applying this principle to gold mining. While working in which her brother, Sawyer, carried samples of gold. Everson discovered that the gold would form a fine coating of tiny particles of gold on the surface of the water. This principle in dredging would save the gold. The gold was then washed out. Eversons took out a fortune. They used some years ago in any substantial amount.

A few years ago several Italian miners patented a process of "froth flotation." A portion of crude oil was mixed with water from a tank of water from a well. The oil was then allowed to be extracted. The gold was forced into the froth. The froth was a soething mass. The gold was shut off a froth. The gold was then allowed to rise to the surface. The gold was then allowed to be separated.

The new process results in greatly increased profits. The process is being widely adopted in the United States, not only in the West, but in copper, silver, lead, zinc, and other minerals. The cost of the process is very low. The cost of the process is very low. The cost of the process is very low.
