

GOVERNOR NAMES ASHER B. EMERY TO SUPREME COURT

East Aurora Man Succeeds Justice John Woodward, Recently Resigned.

Governor Miller has just announced the appointment of Asher B. Emery of East Aurora to succeed John Woodward, resigned, as justice of the supreme court for the Eight judicial district.

Mr. Emery is the present well-known Erie county attorney, one of the most popular members of the Erie county bar. Born in the town of Aurora, Erie county, in 1867, he received his early education at East Aurora academy. In 1891 he was graduated from the University of Buffalo college of medicine and in 1894 from the University of Buffalo college of law. He was admitted to the bar in 1895, and since then has been actively engaged in the general practice of his chosen profession in Buffalo.

Emery Family One of Lawyers
Mr. Emery comes of a family of lawyers. His father practiced law in Erie county for many years. His elder brother was the late Justice Edward K. Emery, whose death a few years ago was deplored by bench and bar. A younger brother, the late

ASHER B. EMERY

Albert J. Emery, was one of Erie county's most successful trial lawyers.

Aside from the office of supervisor from his native town, Mr. Emery has never held office except county attorney, in which he has displayed more than ordinary ability. Many of the leading attorneys of Erie and other counties recommended Mr. Emery highly for the honor which has come to him.

The lawyers and judges, as well as the well-informed laymen of Western New York, all unite in the view that Judge Emery will prove a worthy successor of Justice Woodward in the supreme court.

Expressions of Endorsement.
Following are opinions gathered at random regarding the appointment. Former Justice John Woodward, who resigned to assume the practice of law in New York city, said:

"I am pleased to hear of the selection of Mr. Emery as my successor on the bench. He is a man of wide experience and conceded ability. The selection of so highly esteemed and capable a citizen is one that must command general approval."

Adelbert Moot: "Mr. Emery combines great native ability, rare good common sense, sterling integrity and high character. An excellent appointment."

Former Justice Daniel J. Kenefick: "Mr. Emery's long and honorable career in public office has demonstrated his ability, integrity and fitness. I feel sure he will prove an ornament to the supreme court bench of this judicial district."

General Louis L. Babcock: "His long experience in public life and at the bar, and his position of supervisor have qualified him and fitted him for the position of supreme court judge. He is a good, level-headed lawyer."

Captain Hamilton Ward: "Mr. Emery will come to the bench ripe in experience with good judgment and ability. He will prove a splendid justice."

Maurice C. Spratt: "It is a splendid appointment."

Dana L. Spring, son of the late Judge Alfred Spring: "His human qualities, training and wide experience make him singularly qualified for this high office."

Frank A. Abbott, former Erie county District Attorney: "He is splendidly qualified by his long experience at the bar and possesses a judicial temperament. I congratulate the bar and also Mr. Emery."

Louis E. Desbecker, former Corporation Counsel of Buffalo: "I have known Mr. Emery for many years. He should make a capable judge."

Eugene L. Falk: "Mr. Emery has one of those remarkably judicial minds that will serve Erie county in a capacity that cannot be duplicated."

RED CROSS WORKING FOR HEALTHIER U. S.

Thousands Aided by Instruction in Care of the Sick, Food Selection and First Aid.

How the American Red Cross guides thousands of persons to health is shown in a summary of the society's activities in the health field based upon the annual report for the last fiscal year. Through its Nursing Service, its Home Hygiene and Care of the Sick courses, nutrition classes, First Aid classes, Life-Saving classes and Health Centers and in numerous other ways designed to acquaint masses of citizens with proper methods of living, the Red Cross carried its message of health into all parts of the country.

The work of the Red Cross during the war in its traditional field of nursing, furnishing the military and naval establishments of the nation with 10,877 nurses, is well known. And there are today 37,787 nurses registered with the American Red Cross and subject to call in emergency. During the fiscal year, 1,551 Red Cross nurses were accepted for assignment to Government service, 888 by the Army and Navy and 1,163 by the United States Public Health Service.

In addition to the nurses enrolled by the Red Cross for Government service, the Red Cross itself employed a total of 1,348 public health nurses in the United States and Europe. By far the greatest number was employed in the United States, 1,257, while 81 were in foreign service.

Home Hygiene and Care of the Sick classes, giving thorough instruction in the proper care of the sick in instances where the illness is not so serious as to require professional nursing care, during the fiscal year numbered 5,170. A statistical picture of the Red Cross operations in this field follows:

New classes formed during year	5,170
Classes completed during year	6,289
New students enrolled	101,068
Students completing course	78,492
What the Red Cross accomplished in giving proper instruction through its Nutrition Service is indicated by the following table:	
New classes formed during year	142
Classes completed during year	188
New students enrolled	2,341
Students completing course	2,013

In addition to the above, a total of 22,006 children were given instruction in the proper selection and preparation of foods.

Through its 260 Health Centers, the Red Cross reached 90,229 persons. In these Health Centers, 4,015 health lectures were given and 781 health exhibits held.

In the United States last year, 75,432 persons were killed and 8,500,000 injured in industrial accidents. To prevent this enormous waste the Red Cross held 5,100 first aid classes with a total of 104,000 students enrolled.

Improved Sewing Machine.
A sewing machine that will do the family darning has now been patented, says Popular Mechanics Magazine. Its essential feature is a steel arm which carries the intricate mechanism controlling the shuttle and feed. This is increased in a ball at the end of the arm. In this way about twenty parts have been eliminated, making maintenance less expensive, and because of its simplicity, requiring less power to run. In darning, the headplate covers over the ball and arm are removed, and the sock is drawn over the ball and along the arm. This construction also permits the sewing and mending of various other articles that require circular stitching.

Good Word for the Boll Weevil.
Mainly to the boll-weevil, and to a less extent to the exigencies of the war, we owe the fact that a cotton equal if not superior to that grown anywhere in the world is being produced in Arizona, where, in the Salt River valley, 28,000 acres of cream-colored bolls now bloom with cotton fiber that averages one and eleven-sixteenths inches in length.

Cotton production in the Salt River valley plantation has increased from 15,000 bales in 1917 to 37,000 bales last year. It is expected that the output in 1920 will be 50,000 bales, which will be about one-eighth of the total production to be used in the manufacture of automobile tires.

This effort would probably not have been made for many years if it had not been for the fact that the cotton crop of the South sea islands had been destroyed by the boll-weevil. The success of the domestic efforts in this direction was largely due to private enterprise.

Height of Aurora Borealis.
A Norwegian scientist, M. Stormer, was able to have photographed at several points in his country, the aurora borealis seen last May, which upset telegraph lines and cables and provided a gorgeous display in many parts of the world.

Comparing these photographs in relation to known stars photographed at the same time, he has calculated the height at which this aurora borealis was spread forth—namely, 312 1/2 miles.

Thus, since the aurora borealis is the most electrical illumination of the purified air gases, the earth's atmosphere extends at least that distance above the earth's surface. Detroit News.

ORPHAN BABY FINDS REAL HOME

There is at least one Armenian child whose Christmas celebration this year will not be dreary, and that is brown-eyed Roxie—once Roxie of Armenia, now Roxie of New York State—who is looking forward to her second American Christmas with visions of delights never experienced by her many little brothers and sisters across the sea. Roxie, who is not quite four, is the adopted daughter of Miss Mary Hubbard of White Plains, and because this little Armenian-American bears so vital a message from the children of Armenia she was chosen as the "baby leader" in the Near East Relief campaign in Westchester county this year. When Miss Hubbard—a Near-East Relief worker at Stivas—first discov-

ARAXIE HUBBARD

ered Roxie, she was a wee, emaciated creature with the shrunken limbs and sorrowful eyes so pitifully common among the little folks of Armenia. What had become of her parents nobody knew, but she had been brought with a host of other refugee orphan children to the American relief headquarters, which for her was to be a haven of rescue indeed. Her quaint, gentle ways quickly won the heart of Miss Hubbard, and when the latter returned to America, Roxie came too and today she is Araxie Hubbard of White Plains—and in all New York State there isn't a healthier, happier little girl than she.

The change wrought in Roxie is no miracle. Food and warmth and loving care would do as much for every one

Taste is a matter of tobacco quality

We state it as our honest belief that the tobaccos used in Chesterfield are of finer quality (and hence of better taste) than in any other cigarette at the price.

COLD WEATHER ADDS TO SUFFERING

Intense suffering throughout the Near East as the result of the cold weather, is reported from various areas overseas.

Conditions among the refugees from the recent fighting in Ismid and other towns of the Peninsula are reported as particularly bad. With the coming of the first real cold this season, relief headquarters were besieged by large crowds of shivering humanity. During four days 1,700 persons were clothed.

The people who read your ads are the people who are to make business "good" at your store— their patronage is subject to your influence.
