## Of Interest to Farmers

**GARDEN TALKS**  
How Deep to Dig

The early destruction of weeds is a nine points of good cultivation out of a possible ten. If cultivation is frequent and timely it need not be deep. Deep cultivation often causes injury to the roots of vegetables and reduces the yield by reducing the plant food supply. No arbitrary rule for a proper depth can be given, the gardeners at the state agricultural college at Ithaca say. It varies with the crop, with the nature of the soil, the seasonal rainfall and the like. It is all ways possible, however, after a few strokes of the hoe or a lunge or two with the wheelbarrow, to examine the soil and see if any small white roots have been cut off. The depth of cultivation may then be regulated accordingly. Beans, corn and potatoes are the crops perhaps most often injured by too deep cultivation, since their roots soon meet between the rows and spread upward quite close to the surface.

**Vegetable Families**

The thoughtful gardener will be interested in the botanical relationship of his vegetables. To the cruciferous group belong the cabbage and its variant forms—cauliflower, brussels sprouts, kohlrabi and kale, also turnips, radishes, horseradish and mustard. The solanaceous group comprises the potato, tomato pepper and eggplant. Peas and beans of all kinds are legumes, corn is a member of the grass tribe, while asparagus and onions are related to the lilies. The melons, pumpkins, squashes, and cucumbers are cucurbitaceous plants. The parsnip, carrot, and parsley, as well as dill and several other pot herbs, belong to the umbelliferæ. Beets, chard and spinach are chenopods. Endive, lettuce, and salsify are composites.

**Homespun Yarn**

The time to take a vacation is before you need one.

The ideal time to plan the furnishings of a house is before the house is built.

Food is fuel. Poor fuel produces poor steam. Poor food, or the wrong kind of food, can't produce pep.

Don't cry about the color of cheese. Cheeseologists say color has little to do with the flavor or quality.

The night air doesn't carry malaria, but the mosquito does. Destroy his breeding places and screen against him.

Don't let your oven shed its heat. Insulate the outside with asbestos. Five-ply sheets for the top, sides and door will do the trick.

Aunt Ada's Axioms: Smiles are the interest on happy thoughts and always add to the world's capital of joy and good will; the home is the best place to pay this interest.

A hundred and one ways to make housework easier will be found in the bulletin "Saving Strength." The state college at Ithaca will send you a copy if you ask for B-128.

Uncle Ab says he's getting tired of talk about going to town to get its "advantages" when the talkers should be working to bring those advantages to the country.

Some folks take a few minutes to go over the tractor with a wrench and an oil can every day; others don't touch it until something breaks and then hold up their work to wait for new parts.

**WANTS MAYOR ROBBINS TO RESIGN OFFICE**

Striking Hornell Shopmen Issue Resolution Asking Mayor for Resignation Because He Used State Troopers

Hornell, July 31. — Declaring that Mayor Fred Robbins had failed to live up to an agreement he made some time ago in regard to the calling of outside police help, the striking shopmen to-day asked that he resign.

The request is made in the form of resolution, a copy of which was mailed to him and another to the city clerk. It states that some time ago Mayor Robbins made an agreement with the Executive Committee of the shopmen that in the event an emergency arose whereby outside help was needed to maintain order that he would first consult with the committee. Instead, the organizations claim he called in the State Troopers when there was no need and that he further declined to have them withdrawn after considerable time had passed and no further trouble developed.

In summoning the State Troopers, Mayor Robbins said he did what he thought best. He announced that they were not brought here in the interests of either side, but simply to maintain order. The firm of Robbins, Brown, Briggs & Robbins, of which Mr. Robbins is a member, handles the railroad business in this section.

**RASPBERRIES SUFFER FROM MOSAIC**  
Serious Disease Spread by Insects—Healthy Stock Only Remedy

With the appointment of a plant disease expert at the Experiment Station at Geneva who is to devote his entire time to a study of diseases of small fruits, raspberry growers throughout the State are looking forward to relief from the serious situation which has confronted them in the last few years with regard to losses from mosaic or yellows. This disease will be the first to receive attention. It has become so prevalent in the Hudson River Valley, say the experts, that there is now practically a complete infection in every planting of the Perfection red raspberries, one of the leading commercial sorts. A somewhat similar condition exists in some other red raspberry sections and the disease is present in practically every planting in the State.

The mosaic produces a yellow, mottled appearance of the foliage, and a dwarfing of the canes. The yield of diseased plants is much reduced, and the berries are crumbly and seedy and entirely lacking in flavor. In favorable seasons, such as the present, the new canes of diseased plants will make a vigorous growth, but this is not an indication that the plants are outgrowing the disease as these canes will show the usual symptoms of mosaic the next season.

Transmitted by Louse

"Knowledge of mosaic sufficient for its control has been lacking until quite recently," say the experts. "It is now known, however, that mosaic is infectious and that, when once affected, the bush never recovers and all suckers which spring from the roots or roots produce diseased plants. At present, the only way in which the disease is known to be transmitted from plant to plant is by the raspberry louse or aphid, an otherwise harmless creature. Since the insects rarely if ever develop wings, the disease spreads quite slowly and it has undoubtedly taken many years for it to attain its present proportions in commercial plantings.

"Due to the fact that growers have not been selecting disease free stock an increasing number of affected plants have been set out with the result that in many cases there is no hope of improving present plantings. Experimental work in selecting and propagating disease free stock will be necessary before permanent relief can be expected. Quantity production for large acreages of disease free plants must be worked out before commercial plantings can be rejuvenated and this will require from 3 to 5 years. Notwithstanding the present discouraging conditions there is every reason to believe that there is a bright future for the red raspberry industry."

**Agriographs**

Uncle Ab says that anyway the farmer has cause for happiness in having a good living at home.

The sluggard will not plow by reason of the cold, therefore shall he beg in harvest and have nothing.—Prov. 20-4.

Hoofa as well as stomach benefit the horse if allowed to run in the wet grass on rainy days during the hard work of harvest season.

Seed in time, weed in time, feed in time. It's a good slogan for the farmer who wants good crops, good stock, and a good bank account.

Everybody seems to want it, but there are still some copies left of F 160, "Harness Repairing." The state college at Ithaca will send you one.

If you win at the fair, don't crow; if you lose, don't grouch. Spend your time learning why you lost or won; maybe the judge will tell you.

Can you identify the family fiver if it should be stolen? Better put some identifying marks on it. A few nicks with a file on some unexposed part will do.

Hot summer weather affects the farm livestock just as much as it does human beings. Good farmers take care that not only their horses but their cows, sheep, hogs, and even the chickens, are well supplied with shade and plenty of water on sultry days.

Poultry, stock and household exhibits that take prizes at the fair are selected and conditioned early.

Some farmers are helping out the family incomes by furnishing garden "sass" and other products to nearby summer resort folks.

Spraying the cows to ward off flies and keep up the milk flow is as much a part of the routine on some farms as spraying the potatoes is on others.

But this I say, He which soweth sparingly shall reap also sparingly and he which soweth bountifully shall reap also bountifully.—II Corinthians IX. 6.

## Classified Adverts.
