## Glue and Screws

YOU don't see them—but the strength and the lasting qualities of the furniture you buy depend largely upon glue and screws.

Underneath the framing of chairs, tables, bureaus and many other pieces of furniture you will find blocks of wood firmly glued into the angles to give rigidity.

Glue has always been an essential of cabinet-making—but glue alone is not sufficient. The unseen blocking of furniture frames should be screwed as well as glued in place.

It is to these important details we give attention in selecting the furniture we offer to our patrons.

The Romance of Furniture

THE "double lock" joint, by means of its double lock method, will reduce warping to a minimum and cause the drawer to slide easily into the case.
