OF INTEREST TO FARMERS

WORK ORCHARDS TILL JUNE 15TH

Cultivate to Middle of Month for Best Results—Spray and Thin With Care. "Cultivate the mature apple orchard up to the middle or latter part of June," says G. W. Peck of the state college of agriculture at Ithaca.

Trees in sod orchards which have not been supplied with liberal applications of stable manure probably need nitrates worse than moister. Fertilizers rich in nitrogen, such as nitrate of soda or sulphate of ammonia, help sod orchards which lack vigor.

Without healthy foliage, a tree is weak and susceptible to winter injury. And even if it escapes a hard winter, it cannot maintain a normal production of good quality fruit year after year.

It is not too early, says Professor Peck, to make plans for thinning the crop. "Apples should be thinned so that they are from six to nine inches apart, depending on the variety and vigor of the tree.

WASHINGTON CALLS PINE RUST COUNCIL

Announces Public Hearing on Quarantines to Control Spread of Blister Disease. The state college of agriculture here has received notice of a public hearing to be held in Washington on June 30th, about extending the quarantine against the spread of white pine blister rust.

The proposed new quarantines extend the prohibition against the movement of five-needled pines, cypresses and gossamerberries, and seek to prohibit all transportation of the cultivated black currant, and possibly of the flowering currants.

The European black currant, sometimes known as the English currant, is said to be especially susceptible to blister rust, and may become infected at a distance of a hundred miles from diseased pines.

Plant disease men say that the blister rust threatens to become as destructive to white pine as the chestnut bark disease has been to chestnut trees.

The date of June 30 has been set for the hearing because it follows the conference on diseases of fruit and rose nursery stocks held on June 29, and the plant disease men can attend both hearings without additional cost.

Lay Floor Right in Beginning; Apply Good Finishing Material to Make Upkeep Easy. Tacked-down carpets which cover the entire floor have more and more given way to rugs only partly cover the finished floors.

Whether the floor is of hard wood or pine it should be well laid, says the state college of home economics at Ithaca, for on the laying depends much of its wearing qualities.

A smooth and durable finish which can be cleaned and renewed with least effort is the desire of every housewife. Stain, filler, oil, paint, varnish, shellac, and wax, or a combination of two or more of these may be used.

Carrots and beets should be young and tender when harvested, whether for canning, for storage, or for immediate use. Those planted early for use during the summer are likely to be too old and tough and tasteless for storing.

An Interview With Mrs. Warren Fisher.

"But you don't understand, Sally, she told me to tell you that—Gosh, this is hard—that—"

"Yes, yes, go on," I encouraged. "That she didn't want you here any longer."

"I was out—the words had fallen. Slowly and separately, they crept into my mind and then came the full import of their meaning. Little shreds of white flame crawled thru my brain, like tendrils tightening and squeezing my mind. Thoughts would not form clearly."

"Then I laughed. It was a hideous sound, even raucous. "Don't, Sally, stop it. Strive for poise or your nerves will snap. I'll admit, tho' that you've been thru enough to make you go crazy."

"So Mrs. Warren said. Mrs. Divine doesn't want me here. Oh! I'm so embarrassed. Was it because of the late hour this morning?"

"But, Ellie, what would father think? It would kill me to bow his proud head in humiliation."

"He doesn't have to know it, Sally. We'll find some plausible reason for returning."

"You—?" I questioned. "Of course, I'm going with you."

"But Ellie, I wouldn't have you get mixed up in it. And besides, your visit is just beginning."

"Don't ever think I'll have anything to do with this bunch. I'll tell you I'm jolly glad to get away from such people."

And so we returned to Jacksonville. I told father that Ellie and I had decided to come home and that she was going to stay with me for a visit.

After we had been home for about a week, there came a note from Mrs. Warren Fisher. I was amazed and uncomfortably puzzled at its contents.

"It is imperative that I see you at once," it began abruptly, "I have arranged to visit a friend of mine in Jacksonville and hope to have a private talk with you immediately upon my arrival."

I showed it to Ellie. Her face went white. I had thought she was a weak, there came a note from Mrs. Warren Fisher. I was amazed and uncomfortably puzzled at its contents.

The next afternoon, the telephone announced that Mrs. Warren Fisher had arrived and it was decided that she should call on me a few hours later.

Ellie said she would stay clear of her as the note sounded like the call was to be strictly private. I remembered Mrs. Fisher as I had last seen her on the night of the dance in Pensacola.

"You're most ambiguous, Mrs. Fisher," I said politely, "may I ask you to be more explicit?"

"It's just this then, I know of your conduct with my trip with him on the train to Miami. I have been informed in detail about your little affair at the Inn. Need I discuss the matter further?"

I was not used to dealing with women like Mrs. Fisher. She was a cold woman, absolutely devoid of sympathy or a sense of humor. There was no unbending. No halfway measures. This was this and that was that.

"And your husband? Is he your source of information?" "It was a foolish question. "It was not necessary for him to inform me," she leaned forward and regarded me with uncontrolled suspicion, "other eyes were watching your movements."

(To be continued) Agrigraphs In co-operation the "co" and the "operation" are equally important. The state college of agriculture at Ithaca farms 782 acres of land.

Firm, smooth egg-shells are made with plenty of oyster shell and grit. Mustard plants are weak individually but tough collectively. Go thru the spring grain now and see that it's clean.

"The farm shop and tool equipment," E 108, is a new bulletin of the state college of agriculture at Ithaca intended to help the farmer make a place to do his own repair work.

Under the law in New York, barbed wire can't be used on a roadside fence, nor on a line fence without the neighbor's consent. And a humane farmer won't use it anywhere.

Uncle Ab says the busy boss hustling the hired help with his own example gets in about three and a half times as much pay as the leisurely landlord urging the laborers from over the fence.

Plan a vacation now. If you can't take it in a lump, spread it over several week-ends, but don't leave it out altogether.

TO WATCH THE WANT ADS is to make your next "move" pay you.
