TINDER present conditions, Niagara power must be supplemented by steam plants, if the ever-growing power demands of western New York are to be fully met.

The power resources of the Buffalo, Niagara and Eastern system soon will be increased materially when the new 60,000 kilowatt turbo-generator being installed in the Buffalo plant goes into service.

The Niagara plants are producing the maximum power from the present permissible diversion of water. Whether generating with steam or falling water, it is the purpose of the companies associated with the Buffalo, Niagara & Eastern to meet the full requirements of the territory served.
