HROUGH all the inconvenience, discom-I fort and anxiety caused by coal shortages and strikes during the past year, Niagara Falls stuck to its job and delivered power to the extent of three billion, one hundred and sixty million kilowatt hours.

To produce this amount of power from steam generating plants would require three million tons of coal burned with the highest efficiency attainable today.

It is fortunate for western New York that Niagara Falls never strikes.

The Niagara Falls Power Company sells electricity at the lowest average price received by any generating system on the North American Continent.
