Eight to One

Recent surveys show that for every dollar invested in the building of electric power plants, eight additional dollars are invested in industries using the economical power thus developed.

The Buffalo, Niagara & Eastern system is investing more than \$10,000,000 in new plant and equipment during the year 1926. This should mean an ultimate investment of some \$80,000,000 in new or expanding industries in central and western New York.

The Niagara Falls Power Company sells electricity at the lowest average price received by any generaling system on the North American Continent.
