SERVING MANY BUSINESSES

Experience of large fleet owners reveals the unusual reliability and economy of the new Ford

the new Ford is found in its increas- Beneath its graceful lines and beautiful ing use by Federal, state and city gov- colors there is a high degree of meernments and by large industrial companies which keep careful day-by-day cost records. In most instances, the Ford has Ford is the use of more than twenty ball been chosen only after exhaustive tests of every factor that contributes to good performance—speed, power, safety, comfort, low cost of operation and up-keep,

reliability and long life. Prominent among the companies using the Ford are the Associated Companies of the Bell System, Armour and Company, The Berden Company, Continental Baking Corporation, Firestone Tire and Rubber Company, General Electric Company, Goodyear Tire and Rubber Company, Kellogg Company, Knickerbocker Ice Company, Morton Salt Company, Pillsbury Flour Mills Company, The Procter and Gamble Company, and

Swift & Company, Each of these companies uses a large number of Ford cars and trucks. The Associated Companies of the Bell System use more than eight thousand.

Medern business moves at a fast pace and it needs the Ford. Daily, in countless ways and places, it helps to speed the production and delivery of the torque-tube drive, three-quarter floating world's goods and extend the useful service of men and compenies.

Constant, steady operation over many thousands of miles emphasizes the advantages of the sound design of the Ford car, its high quality of materials, and

unusual accuracy in manufacturing.

An example of the value built into the and roller bearings. They are hidden within the car and you may never see them. Yet they play an important part in satisfactory, economical performance. Their function is similar to the jewels of

a fine watch. Throughout the Ford chassis, a ball or roller bearing is used at every place where it is needed to reduce friction and wear and give smooth, reliable mechanical operation.

At many points, as on the transmission counter-shaft, clutch release, fan and pump shaft, and front drive shaft, these ball and roller bearings are used where less costly types of bearings might be considered adequate.

Additional instances of the high quality built into the Ford are the extensive use of steel forgings, fully enclosed four-wheel brakes, Rustless Steel, four Houdsille double acting hydraulic shock absorbers, aluminum pistons, chrome silicon alloy valves. rear axle, and the Triplex shatter-proof glass windskield.

The Ford pulicy has always been to use the best possible material for each part and them, through large production, give it to the public at low cost.
