The Old Swimming Hole

#F ALL of the safeguards for a good swim, advised by medical authorities were followed to the letter, comparatively few of us could ever know the joy of a refreshing dip, unless we were so fortunately situated that a lake or the seashore were available.

There is no intention of ridiculing common senso rules that should be observed in indulging in this fine; summer recreation, but to every boy and many men who are still boys at heart, the old swimming hole ever has a lure that can't be resisted. While it is true drownings do not account for all

the deaths from swimming each summer, there are many who have no access to sanitary pools, and must instructed so that grouping, not only on a basis take a chance when they enter the water. They can specific life purposes of the group becomes possible." be reasonably certain as to its purity, however, if the! water is moving and is cleansing itself. Of course, the risk that accompanies swimming in stagnant water

maining in the water longer than 30 minutes. Allowing wet clothes to dry on the body is regard-rushed in type, the paper is printed and soon the news ed as a dangerous practice that may lead to serious is public property. and changing into dry clothes.

The Old Fashioned Pug

TITHAT has become of the pug dogs that once were If the sign of affluence—that graced the hearthstone of many homes-that were a mark of aristocracy? A New York newspaper writer says there are only two pug acgs in New York City. How he knows is, beyond comprehension, but if he's right, it's useless to try to locate a pug dog in Allegany county.

Think what the present generation is missing in ments. not having a pug dog in every home. For the benefit of young people who never had the companionship of a pug dog, a general description of a pug dog might be apropos. A pug dog was just a pug dog—and that's about I nize one as soon as you see him.

all that could be said for one. He derived his name perhaps pur noses got their name from pur dogs. slight toothache, he is as solicitous of his jaw as That's too deep a question to go any farther. Altho pet dogs, pugs were seldom playful. Hence,

the word pugnacious, meaning disposed to fight, and if he had one foot in the grave. If he is afflicted with the noun, pugnacity, meaning an inclination to fight. indigestion, as most of his kind are, he never loses an j Hense, also, the sporting term "pug" meaning a prize opportunity to tell his friends about it.

with age and slept most of the time. - Noah Webster called them pet dogs, but he probably never had one the reason you will have no difficulty in recognizing or he would have called it by another name. It really isn't fair to libel the pug dog any more when there is none of the breed left to uphold the fair stages are beyond hope, but a little persuasion used name of rugdom.

Once upon a time there was a match tray that had matches in it, and an ash tray that caught all of the

All thru this experiment station' similar tests were being made various combinations of food. this means the correct feeding dairy cattle was being reduced to a The results of this scientific knowledge are now available to every farmer, and there is little excuse today for the owner of dairy cattle not knowing how to keep his! herd on a profitable production bas-

We have already referred to the dairy cow as an example of a modern machine perfected thruout the years of manufacture of milk. think we will have a greater regard' for the humble cow and will be far more considerate of her comfort and surroundings if we know a li tle more about the mechanism which she produces milk.

How many times, for instance, are we neglectful, in cold weather, of water for the cattle? We do not realize that their bodies consist from 70 to 90 per cent. liquid Water performs many-important functions in the body. It dissolves the food, acts as a carrier of food and waste, and is a more important element in the chemistry of the body. Any interference with the amount of drinking water may be serious and it should be supplied to livestock in large amounts all seasons of the year. In the winter time, drinking water should not be cold.

The digestive organs of the cow are extremely interesting. As most of us know, the dairy cow chews her food just enough to moisten it, before she swallows it. It is held in the paunch until she is ready bring it back in the form of a cud, when she masticates it and mixes it with saliva. This is the first step in Each one is chewed about a minute before it is returned for digestion. cow in reality has four stomachs, each one of which performs a certain function. The first stomach acts as a churn where further mastication takes place. The second apparently has no digestive juices by is a sort of policeman to the food, foreign objects which may happen The third stomach has powerful muscles which squeeze the moisture out of the food and prepare it for entering the true stomach. From there on the processes are very similar to those in other

It is a fact that this is a more complicated procedure than the digestive processes in other animals. Therefore, it is very necessary that during the period when she is transforming her food into milk. A cow, when disturbed, immediately ceases chewing her cud, which means that at the next milking period her supply will be greatly reduced if the
