HOW, WHAT & WHY? BRIEF BUSINESS BRINGERS

The Andover News has arranged with the Office of Information of the New York State College of Agriculture and Forestry, to answer your questions about problems of farm and home. Answers to questions of general interest are printed in this column; but if you inclose a self-addressed, stamped envelope, and mention the name of this paper, you will receive a direct reply to your query from the College.

Household questions about food, shelter and clothing for all members of the home circle are welcomed. Farm questions may deal with anything from the largest farm enterprises to a table-cloth-size backyard garden. Send in your queries. Address them to How, What and Why, Room 201, Roberts Hall, Ithaca, N. Y.

Planting by Moon P. C. C. asks: "Does plowing by the moon have any effect on crops?" Scientists say no. Moonlight has only one six-hundred-thousandth part of the value of sunlight. Plants can not thrive on one six hundredth of sunlight.

Boiling Potatoes Mrs. C. H. asks: "Can you settle an argument on how to boil potatoes? I start mine in cold water, but a friend tells me they should be put in boiling water. Which is right? Or does it make any difference?" Your friend is right. The hot water cooks at once the outside layer, and there is a smaller loss of food value in the cooking process. This is a safe rule for all cooked vegetables.

Most Valuable Crop J. B. N. asks: "What is the most valuable crop in the world?" This looks like a catch question, but it is answered seriously, the much depends on the meaning of the word "valuable." Rice is unquestionably the most valuable crop in the world, if figures are obtained by multiplying price paid to growers by the quantity produced. It outranks wheat, cotton, sugar, and any other one crop. If the word "valuable" is used figuratively, it might be said that the statement of the sociologists to the effect that "boys and girls constitute the most valuable product of the farm," is wholly true.

Mrs. F. N. writes: "Please tell me what kind of candy is best for growing children?" Candy is a good food for lively children since it supplies energy. Combinations of sweet fruit, honey, and nuts are good; chocolates and candies made of refined sugar should be fed to children sparingly, if at all. The chocolates are likely to be too rich. Be sure to keep in mind that the best time to let children have candy is directly after meals—never before meals.

Moth Medicine Mrs. G. C. T. asks: "How can I get rid of clothes moths?" A substance with a long name makes short work of moths. It is paradichlorobenzene, sometimes called "paradi" for short. At any rate it sends the insects to moth Paradise, if there is any such place for them. It comes in white crystals, and costs about 60 cents a pound at the drug store. Put it with the moth infested fabrics in a closed trunk at the rate of about five ounces in a small muslin bag for an ordinary-sized trunk. Methods of dealing with all kinds of household insects are given in bulletin E 202. It can be had free from the College of Agriculture at Ithaca.
