No. 2—NIGHT DRIVING

Tr's Just as True as can be that when people get expert at anything they're

A apt to begin getting careless about it, and that's what we have to look out

engineers discussing night driving, and one thing they kept talking about

Almost before we know it we may have to slow down or stop for someone

that you barely see till you're right up on them; or a

car whose tail-light has gone out . . . an unexpected

again. You see, stopping isn't the one simple action

that there are really three things we have to do to

stop. First we have to think of stopping. Next we

have to move one foot over on to the brake pedal.

Now we might not believe it, but they tell us those

And then we have to push down on the brake pedal

first two steps take time. Less than a second, perhaps,

In fact, at only 20 miles an hour the average driver

goes 22 feet before he can even start to use the brakes.

we always thought it was. The truth is, we are told,

or something on the road . . . perhaps one of those big lumbering trucks

DISTANCE REQUIRED FOR STOPPING

Then after he does get the brakes to working it takes him another 18 feet

tires, under favorable road conditions. At least so we are told by the State

Board of Public Works of one of the states which has made a very intensive

The truth of the matter is that night driving can be just as pleasant and

just as safe as day driving. But we have to be more alert and more careful.

study of drivers and driving conditions, and which

needed to stop increases a great deal as we increase

The important thing to realize is that distance

We just have to remember that when we're mov-

Now, just as engineers have told us how to operate

other cars at night, is to stop looking

n safety with our own lights, many experienced

drivers have pointed out how to avoid trouble from

other people's lights. They say that all we have to do.

ing along in a car, we think by the foot, act by the

foot and stop by the foot, and if we aren't careful, it's

easy to get going faster than is really safe.

has prepared the data for the above chart.

to stop completely, even with the best brakes in the world and with good

at their lights and watch the right-hand side of the road.

Now that term seems to be a common one with them, but it's new to most

What they mean is that the distance we can see

clearly by headlights is, of course, limited, and that

we are apt to let our car speeds get beyond the point

where we could easily stop within that limited dis-

tance. It's true that we naturally tend to go a little

slower at night. But if we aren't careful we gradually

get going faster than we realize, and that may get us

into trouble. You see, momentum, the same force

that tries to keep us from making turns safely; that

cuts all kinds of capers on slippery roads . . . never

sleeps! He works on the same old principles night and

day. Darkness doesn't hinder him, but it hinders us.

lights, but after all they don't give us the distance
