No. 3—MIST AND FOG To Long as there is light we may skip around at a lively rate over this old J globe of ours. We may span oceans in surprising time. We may cross the continent from sun-up to sun-down.

But every now and then Mother Nature decides to put us in our place, and of all her devices to make us slow down, none is more effective than mist and Now we may not have to contend with fog and mist very frequently, but we're bound to now and then, and when we do, it can cause us a lot of annoy-When a good heavy fog comes--on land, at sea r in the air—everything that moves, moves with n hour. Lightships signal, buoys sound and foghorns

1. The ocean liner slows down several knots trains on tracks reduce their speed—and we our progress, transportation still depends on pairs of eyes in human heads Scientists who have studied fog, say that it i composed of tiny drops of water. These drops are

them. Instead, these little drops act like tiny convex mirrors. When we try to pierce them with a beam of light, a great deal of it is thrown right back at us, so the effect is just like a great, gleaming white cur-HOW MIST DROPS

is to get our lights right. The main thing is to direct the beams downward. If we have them shining straight ahead, those little mist-drop mirrors reflect the rays back in our eyes. But if they're pointing downward, the rays are deflected toward the road. Then they say it's a good idea to guide by the road edge at our right and if we have a spotlight on our car, to focus it right on that road edge

close together that light can hardly get through

Experienced drivers say that the first thing to do

close to the front of the car, so the edge will be clearly lighted But we have to keep a good weather eye ahead, too, because fog veils more than the road. uides not only things on the road but such things as coadside warnings of curves and hills and intersections. Even the traffic light's red and green signal rays have the same hard time that our headlight do getting through that strange haze. In fact, in a good heavy fog, the best we can do for our vision is none too good. And so the main thing is to slow down. The ships have to do it, the trains have to do it, and we have to do it too. If we won't make up our minds to that, they tell us the best thing we can do is to

just a matter of having our headlights and tail-lights right and being a little more careful. If we do that, we can drive our cars safely, even through Nature's stubborn obstacles of mist and fog.
