Grass Seeds

It is now the time of year to begin thinking about the sowing of seeds in the spring.

The past season was a very good one for developing and ripening seeds of all kinds.

Timothy acreage was about the same as usual and an average crop has been harvested. The price for this year will be about the same as for 1938. If there is any advance it should not be more than 25 cents per bushel above the 1938 price.

On Clover Seed the report is much more cheerful. On account of the high price last year less clover seed was sown, hence there was some carryover. This, together with a good big crop last fall, gives us a larger supply for this year's sowing. In fact the supply is sufficiently large so that the price will be reduced at least \$10.00 per bushel.

We are in a position now to take orders for Medium or Mammoth Clover at \$15.00 per bushel and Alsike at \$14.00 per bushel.

There was considerable clover

harvested around here last fall. We sent in one sample and the purity report was very good. However, it was quite low in germination. Just what would cause this we do not know, but the fact remains that such is the case.

We urge everyone who has home grown seed to send a sample to the "New York State Agricultural Experiment Station, Geneva, N. Y., and have it analyzed. If it is found low in germination all you need to do is add a certain amount extra for each acre sown and you will thus have your usual seeding.

There is no reason why you should not get just as good a seeding from home grown seed as from seed raised in Ohio, Indiana or Michigan.

However, if buying home grown seed from a neighboring farmer, our seed at \$15.00 per bushel would be as cheap as his would be at \$9.00 or \$10.00 per bushel due to the difference in germination.

Come in now and leave your orders for your spring's need. The price is guaranteed.
