

SUMMONS

STATE OF NEW YORK COUNTY COURT: COUNTY OF ALLEGANY. GERTIE GLASE SLOCUM, Plaintiff

against BERTHA BLAUVELT SMITH, NINA WITTER, RONALD WITTER, HOWARD WITTER and CHARLES SLOCUM, Defendants.

TO THE ABOVE-NAMED DEFENDANTS:

YOU ARE HEREBY SUMMONED to answer the complaint in this action, and to serve a copy of your answer, or, if the complaint is not served with this summons, to serve a notice of appearance, on the plaintiff's attorney within twenty days after the service of this summons, exclusive of the day of service.

Dated: May 11th, 1942. REGINALD J. SOOTHERAN, Attorney for Plaintiff

Office and Post Office Address Andover, New York

TO RONALD WITTER:

The foregoing summons is served upon you by publication pursuant to an Order of Hon. Ward M. Hopkins, County Judge of Allegany County, dated May 29th, 1942, and filed with the Complaint in the Office of the Clerk of the County of Allegany at Belmont, New York.

REGINALD J. SOOTHERAN, Attorney for Plaintiff.

The object of this action is to partition certain real property in which the said Ronald Witter has an interest, which interest is described in the Complaint filed in the County Clerk's Office at Belmont, New York, and that a brief description of the property affected by this action is being a house and lot situate on the Easterly side of Third Street in the Village of Andover, New York, and being the property owned by Chancy G. Witter during his life time and described in a Deed from Joseph L. Williams and Ida Williams to the said Chancy G. Witter, and recorded in Allegany County Clerk's Office on the 12th day of March, 1924, in Liber 254 of Deeds at Page 67.

His Unlucky Number "I've never had a chance," said the man with the hang-dog expression. "No matter what I do my unlucky number pops up and gets me into trouble."

"What is your unlucky number?" "Thirteen, Twelve jurors and one judge."

Always Tardy It was at the theatre. The orchestra had just been seated; then, as customary, the director came in.

Immediately, the stillness was broken by the sound of a small girl's voice: "Mamma, that man is late again."

Uncle Ab says there are two sides to every question—on which we haven't taken sides.

Plant Breeders Defeat Nature With Clever Plan

Beating nature by producing a crop of corn in winter, as well as in summer, is one of the tools plant breeders use to hasten their work at the agricultural experiment station at New Haven, reports the station.

The corn is planted in the greenhouse in January, is given extra hours of artificial light, produces ears in May and thus reduces the time for experiments by one-half, according to Dr. W. R. Singleton. The ears are not so good as those produced in the field, he says, but they furnish a supply of seed that is one generation ahead of last summer's stock, to be used in outdoor experiments at the station farm at Mount Carmel next season.

Electrical Recording of Heart of Frightened Cat

The heart throbs of a cat upon sudden sight of another cat or a large and active police dog have been captured and made permanent in the form of electrical records by Drs. J. G. Beebe-Center and S. S. Stevens of Harvard university.

The feline heart does tricks under these emotional circumstances that it does not do even when the cat hears a pistol shot. The menacing dog speeds up the cat's heart an average of 81 per cent, and about a second after first sight of this natural enemy a single extremely fast beat occurs, which may be an extra beat. This increase in heart rate is so extremely great that it may be close to the physiological ceiling for the animals, the investigators stated.

After the pistol shot, the heart also speeded up and the increased rate lasted just about as long as that produced by the police dog. But the speeding up was not nearly so intense, and the extra fast beat was not observed.

The heart was not chosen for study in this connection because of any idea that it is the seat of the emotions, but because the heart rate is an easily measured body response to emotional situations. The cat served as subject because it is so easy to place her in such a fur-raising, spitting situation.

A Long Hike

First Girl—"Dick says he came from a good family." Second Girl—"Yeah, and I'll bet he's footsore."

Experiments to Produce Silk Never Succeeded

The story of silk sounds a counterpoint to the story of America. When men first came from England and Spain to found a new world across the sea, silk was a romantic substance—sharing the glamour of the mysterious East with such other exotics as precious jewels, herbs and spices.

The persistence of the effort to establish sericulture in the American colonies is not generally known. It was started in 1620 by Frenchmen settling at Buckroe, Va. Two years later, King James I sent his Virginia colonists 80 ounces of silkworm eggs, not so much because he wanted them to produce silk, it was said, as because he detested tobacco and hoped to discourage the growing of it.

The Carolinas and Georgia undertook silk production a century or so later with somewhat more success, the Carolinas in particular being well suited to the growth of the mulberry trees which feed the worm. In the 1760s, New Jersey, Delaware and Pennsylvania offered bounties to encourage sericulture. But it was complained that the American product was "badly reeled on hand looms and roughly spun on the large wool wheel," so that it could not compare with the imported product.

Women's Propensity to Weep at Right Moment

Judge Frederick Brumback of Los Angeles recently discharged two juries in the same suit, because the plaintiff, a woman, burst into tears while testifying. Tears, said the judge, prejudiced the jury, whether they would or not.

Others familiar with court room procedure have learned many things about the mysterious feminine propensity to weep at the psychological moment. The thing is an instinct with the sex. A woman can do it without having to learn, just as she can sit on her feet, or wear long fingernails without injuring a \$50 creation of filmy stuff, or eat candy before breakfast, or talk with her mouth full of pins, or dance in shoes with four-inch heels, or any other item from the catalogue of weird accomplishments with which nature has endowed her in this most modern of all worlds.

Poor Illustration

"What is your recreation, my boy?" said a banker to his caddie. "I'm a Methodist, sir." "No, no; that's your belief. I mean, have you any particular sport or hobby? Just as, for example, I myself am a golfer?" "No, that's just your belief, sir," said the boy.

HOW, WHAT AND WHY? Special to the Andover News

Septic Tanks A. S. of Gasport, writes: "After cleaning a septic tank, must more chemicals be added?"

Prof. J. C. Mc Curdy of the Agricultural engineering department replies: "It is not necessary to add bacteria or chemicals to the septic tank after it has been cleaned. The sewage contains the necessary bacteria."

Corn Borer Control W. C. of Webster, asks: "Is there any preventive for corn borers?"

er? Prof. R. W. Leiby of the entomology department answers: "The first brood of corn borer is now at work. It is too late to begin making four dust treatments with 1 per cent rotenone dust in order to get 90 per cent mature ears that are free of borers. It would, however, be advisable to start dusting corn which is now about two feet high with expectations of getting fair control at the time of maturity of such young corn.

"A grower would need to make four applications at intervals of about five days and he would need to apply from 30 to 50 pounds of dust per acre, using the latter amount on corn that is well grown. Similar dust treatments should be made in sections where the borers were noticeably destructive last year on later-maturing varieties, and the first treatment should be given when the corn is about two feet high.

"Some further reference to the habits and control of corn borers are given in the vegetable insect bulletin, which has been sent to you."

The Next Assignment

Publisher—"Have you finished the book which tears down the reputation of George Washington?"

Pen Pusher—"Yeah." Publisher—"All right! Start in on one making a hero out of Jesse James."

ARMY CROSSWORD QUIZ

Crossword puzzle grid with numbers 1-101 indicating starting points for words.

—Designed by Mrs. J. B. Calbreath, McLean, Virginia.

- ACROSS 1. Barracks where provisions are sold 67. Army of the United States (abbr.) 70. Practical skill 71. This is anger 72. A register 74. A kind of igneous found in Derbyshire, Eng. 77. Recorded tape (Signal Corps) 78. Move on 79. Complaints 81. This is a finger or a toe 83. Word of denial 84. Badge worn on shoulder by military officer 86. This is our very own Uncle 88. YOUR CAR How to Get the MOST out of it

KEEP IT LOOKING NEW One of the obvious ways of getting the most out of your car is to keep its finish from disintegrating. Here are some house-keeping hints:

- Park in the shade as much as possible. Don't let your car stand in the dew at night. A clean, dry cloth is all you need if the finish is just dusty. Grit or sand or mud should be flushed off. Cold water, cool car, cool location out of the sun are three things to remember when washing. Dry with a chamois or soft cloth. If you use polish to renew luster, don't use too much; rub lightly and rub until dry. If the color seems to rub off, don't worry; it's just dead pigment. Polish helps protect finish at the seashore. Chrome-plated parts should be protected by furniture wax or even motor oil. Remove rust with porcelain-type scouring powder. Wash frequently when salt is in the air or on streets. Oil or grease on tires should be removed immediately with soap and water. Take dust out of car upholstery once a month with whisk broom and vacuum cleaner. Remove spots before they soak in and dry.

Note: This is the last of a series of articles on how to get the most out of your car based on the 64-page booklet, Automobile User's Guide, published by the Customer Research staff of General Motors. If you would like to have this booklet, send your name and address to this newspaper. A copy will be sent you without charge.

10 MEN FORM A GRUPPE (SQUAD)

Diagram showing the structure of a German squad (Gruppe) with 10 members: Leader (Unterfeldwebel), Assistant Leader (Oberschütze), No. 1 Gunner (Gefreiter), No. 2 & 3 Assistants (Schützen), No. 4 to 6 Riflemen (Schützen), and No. 7 to 10 Riflemen (Schützen). Includes national emblems and helmet side views.

In the Nazi Army the unterfeldwebel (sergeant) leads a squad, pictured below. His assistant, an obergefreiter, ranking with an American corporal, and the No. 1 gunner, a gefreiter, also graded as a corporal, lead seven schutzen and ober-schutzen. Armed with rifles, pistols, light machine guns, machine pistols and hand grenades, as indicated, the fire power of the "gruppe" is apparent.
