## It takes 40% more food to keep him going

OUR men in the armed services require an average of 5% pounds of food every day to keep in top physical condition.

That's 40% more than the average civilian consumes.

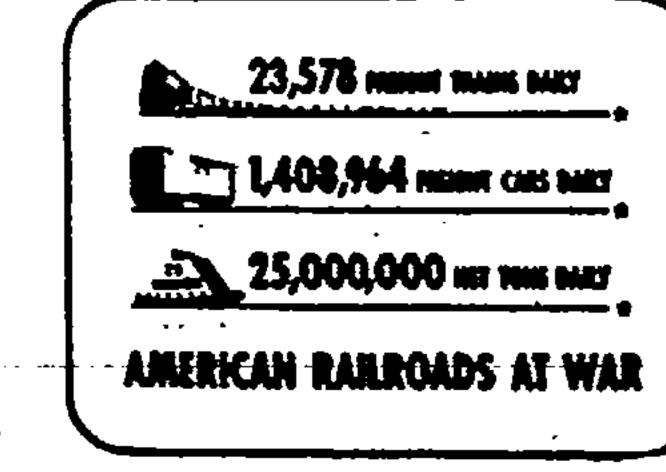

Armed forces in this country must have a 90-day reserve supply available for every man to assure them the right food at the right time.

For each fighting man abroad, a 9-month supply is necessary as a safeguard against the additional time required to transport it, ship sinkings and other war losses. So the job of transporting grows greater and greater for

Erie and other American Railroads as more and more men move to the battle fronts. And food is just one of the thousands of items railroads must carry in increasing quantities for our fighting men.

Right now the big job of your railroads is to keep the growing quantities of war supplies moving to our men

And with the continued cooperation of the public, shippers and government agencies, Erie and other American Railroads will keep these supplies rolling until victory is won.
