Sixteen thousand additional Shock troops of the STE

BRIGABEI

Those poxes you see our boys carrying at the front lines food, medicine, and ammunition—are made of paper board and corrugated paper. They have to take all the shocks and strains of shipment to the earth's far corners.

The raw material for that heavy paper is dangerously scarce. Our troops need waste paper of all sorts. But they desperately need corrugated paper, paper board, and brown paper bags and wrappings.

Never throw any waste paper away. Never burn waste paper, and especially save heavy paper. It's all as important as powder in this war. So save it!

Buy Bonds—and more Bonds.

O put a single 155mm gun in action at the front and maintain it for a year, requires a total of 3603 ship tons.

That's an average of nearly 10 tons of transportation a day for each gun!

And, this doesn't include transportation of the 134 officers and men in the battery, and their supplies. As thousands of these big guns roll up to the front

to blast enemy positions, the job of Erie and other American Railroads becomes bigger and bigger. For it is the immediate responsibility of your rail-

roads to keep not only these guns and supplies, but hundreds of thousands of other items, rolling from the production lines to the battle lines.

With the continued help of the public, shippers, and government agencies, your railroads will keep the vital war loads rolling on to hasten the day of victory.
