American Enterprise Scores Again

AFTER two years of research, the announcement is now made that the oil industry is ready to produce at the command of the military forces, new super-fuel for aviation so much more powerful. than 100-octane gasoline that it will permit maximum bombing of the Japanese mainland on a "suburban service schedule." While the chemical details of the new product are withheld, the Petroleum War Council has disclosed that this fuel, called "100octane plus," is expected to surpass all other gasolines in the world in volatility and consequent per- 666 TABLETS. SALVE, NOSE DROPS formance.

William R. Boyd, Jr., chairman of the Council, said that the product was designed to "draw from I the lethal B-29 Superfortresses and the futuristic B-32 Bombers and most modern fighter escort planes, their originally intended maximums in sustained speed, short take-offs, combat radius and load-carrying capabilities."

It should be stated that this is just another ac- SUBJECT complishment of private enterprise in the United States which again surpasses anything the dictators and their totalitarian governments have ever accomplished.

You can pass a law raising prices to raise wages, PLACE - - - ' but no one has yet figured out a law that will make the consumer buy a product at a price higher than that of a competing commodity or service.

At one time there were over 5,000 Shaking Quakers, or "Shakers" as they were called, in America. Now there are less than 50.
