 Treasurer of Allegany County

**Being "Bugged" This Season?**

Home gardens are being "bugged" this season as never before. From tiny "no-see-ums" to bumblebees, it is open season on the tillers of the home soil. Gardeners are being beset from all sides by insects that have developed a might resistance to "miracle" poisons developed for their extinction.

For most people, being bitten, stung, or harassed by flying creatures while weeding, pruning, mowing, watering or planting is but a minor annoyance, but for some a sting can mean extreme discomfort, illness or even sudden death, according to the Department of Safety and Research of the Combined Life Insurance Company of New York.

Researchers report that of all the deaths in the United States during the 1960's known to have resulted from bites and stings of venomous creatures, more than 60 per cent were caused by insects. Nearly half of these were the work of flying species.

The Health Insurance Institute says honeybees, wasps, hornets, yellow jackets and fire ants will kill more people this year than will snakes and spiders. These insects cause two out of every five deaths resulting from venomous bites in this country.

A study of 2,606 sting cases by the American Academy of Allergy shows that 50 per cent of those who suffered severe reactions had no previous inkling that they were allergic to insect venom. Medical authorities acknowledge that no one knows the exact toll in lives because sudden death in the garden may be attributed to heart attack without further medical investigation.

The first danger sign that a sting may cause allergic reaction may be shortness of breath, palpitations of the heart, painful movement of rapid swelling and inflammation of the affected area. A person with any unusual or fast reaction should summon help or rush to a doctor or a hospital for emergency treatment. If he is aware of his allergy, he should ask his doctor for medication to carry with him in the out-of-doors.

What should you do after an onslaught from the insect world?

In the case of attack by a bee or wasp, look immediately for the stinger that may have been left imbedded in the skin. Although the insect may have flitted off, the stinger that remains is still pumping venom into the system.

Do not try to pull out the stinger of a bee, wasp, yellow jacket, hornet or ant because it is really a sac containing venom, and the more pressure you put on it, the more venom goes into the body. Ease it out with cellophane tape or scrape it out with your fingernail, a needle or some other sharp instrument and then wash the spot thoroughly to avert possible infection. Apply ice or a cold compress if possible.

A biting insect such as a mosquito or tick will leave no venom, but its saliva will enter the tissues while it is ingesting your blood. If a tick has a firm grip on your arm or leg, apply a drop of mineral oil, gasoline or kerosene to it, and it will relax. Then remove it with tweezers and wash the area thoroughly.

Don't try to pull a tick out with your fingers. If you do, you are likely to leave its jaw imbedded in your skin as a potential source of infection.

Bites of flies and mosquitoes should be cleaned thoroughly and daubed with catamine lotion or a mixture of baking soda and cold cream to relieve pain and itching.

The Health Insurance Institute reports that a solution of one-quarter teaspoon of meat tenderizer and one tablespoon of water rubbed into an insect bite often brings relief.

Also recommended by a wider variety of experts are sunburn relief products and other drugstore items containing mild local anesthetics.

Combined's safety experts admonish that the best cure is the proverbial ounce of prevention. Here are some of the things recommended to prevent or minimize the annoyances of garden pests:

1. Don't go barefoot outdoors. The feet and lower legs are prime targets of insects that lurk in the

2. Don't wear hair spray, perfume or bring colors into the garden. Refrain from eating sweet fruit, such as watermelon, or ice cream and candy outdoors because insects savor them almost as much as you do.
3. When insects start buzzing around you, don't flail your arms and swat at them. Try to remain calm and you will be less likely to attract their attention. If you see a bee coming in for the "kill", however, cover your eyes to protect them from being stung.
4. Don't try to combine sunbathing and gardening, particularly while mowing. Gardeners mowing are among the more popular targets of insects. Therefore, try to expose as little skin as possible; wear long sleeves, a hat, gardening gloves and shoes.
5. Carry an aerosol insecticide spray in your pocket or garden cart.

When you know that you are going to be in a certain spot in the garden, for sunbathing, or cookout or just work among the petunias and marigolds, you can minimize the threat of insects by spraying the area in advance.

A number of repellents have been found to be effective when sprayed in a yard. They can ward off insects for as long as several hours, but you should take care not to spray into the wind or directly on trees or plants, which can be damaged by some substances.

And, of course, there are a number of repellents you can apply safely to your skin in the forms of creams, sprays, lotions or foams. Other insecticides are effective when applied to clothing.

Of utmost importance, safety experts warn, is that you make it clear to your druggist what you want — and what you want it for. And then before you spray, daub, smear or otherwise use insect antidotes and repellents, read the label carefully — every word!

**Cultural Program Schedule Announced**

Alfred University and the State University Agricultural and Technical College at Alfred announced recently a cooperative series of 1973-74 cultural programs that will bring nationally known speakers and stage productions to the two Southern Tier campuses.

The initial offering in the series was a lecture by author George Plimpton Sept. 13 at Alfred University, followed by the musical "Godspell" Sept. 21 at Alfred State College.

Rocket scientist Wernher von Braun will speak Sept. 24 at Alfred University. On October 11 the theater group known as the Otrabanda Players will appear on the same campus.

Novella Nelson, a singer will appear Oct. 24 at Alfred State College. Alfred University will be the site of concerts by the Buffalo Symphony Orchestra and pianist Gary Graffman Oct. 29 and Nov. 2, respectively.

"Windom Plays Thurber" will be the offering Nov. 4 at Alfred State College. Robin Morgan, a Woman's Lib activist, will appear Dec. 4 at Alfred University.

In 1974, folk singer Burl Ives is scheduled to appear Feb. 13 at Alfred State College. Alfred University will be series host for the next four presentations: the Tokyo String Quartet, March 8, the National Players, March 13; a Detroit

courtroom judge, Justin Ravitz, April 5; and Newsweek columnist Shana Alexander, April 16.

Obosit Burt Lucarelli will appear in concert April 24 at Alfred State College. The season will close May 8 with lectures by representatives of Daughters of Bilitis and the Gay Alliance, at Alfred University.

Offerings on both campuses will commence at 8:15 p. m., locations to be announced at a later date.

Season tickets to the series are available at Cannon's, Main St., Wellsville; Jacobs Brothers Shoe Store, Main St., Hornell; and at the Alfred University office of public affairs, Greene Hall, Alfred.

Tickets for individual events will be sold at the door.

**Card Of Thanks**

We wish to express our heartfelt thanks for the acts of kindness and expressions of sympathy extended to us at the time of our bereavement.

**From A Nutrition and Economic Viewpoint: Milk Is A Bargain**

Food prices are up.

But the retail cost of milk increased only 17.1% between 1967 and 1972 compared to 23.5% for other foods.

In the wake of a 12.4% increase in farmer costs so far this year (June 1973 vs June, 1972), dairy farmers throughout New York State are requesting an increase in the price they receive for milk at the farm. When it occurs, the retail price of milk will probably increase slightly.

But with meat and other food costs skyrocketing, milk continues to offer high-quality protein for the diet at low cost — even at slightly increased prices.

For example, according to the U. S. Office of Consumer Affairs, in February 1973, 29 grams of protein from milk cost 18 cents; 47 cents from sirloin steak; and 33 cents from ocean perch. Calcium, vitamin A and D are among the other nutrients supplied by milk.

The way to adjust to the higher cost of food is to adjust our way of eating. Less dependence upon high price items, and more imaginative use of alternative foods, particularly among proteins, will go a long way toward holding food costs down.
